

TECH TIP: Remove Pump Wobble

Here's a great tip for those who like 'tight' pumping action. Reduce the wobble in your pump stroke by tightening up the pump arm to the pump handle. Keeping the threads from rotating will greatly reduce loose 'play' commonly associated with pump wobble. CCM pump kits feature a terrific pump stroke. One of the reason's is their kits are shipped with the pump arm 'loc-tite' to the pump handle.

Add a drop of thread locker on any pump arm and you'll notice a significant reduction in pump wobble.

Bill of Materials:

- (1) Pump Kit
- (1) Loc-Tite thread locker
