

# TECH TIP: Model?

---

Here is a list of characteristics that separate the different models. This is a great way to learn how to determine the correct model for your marker body.

Bill of Materials:

- (1) Dime (10 cents)
- (1) Paintball

2k+: The banjo bolt used to hold the front block to the body is similar to the size of a dime.

pre-99: The banjo bolt used to hold the front block to the body is smaller than a dime.

Trilogy: No banjo bolt is used. Instead, look for a barb on the front regulator.
